Subject:	09/854,844 search

Hi,

I would like to request the following searches (09/854,844 Hu et al.):

1. a standard search of seq id 1 in the nucleic acid databases (commercial and interference)
2. a standard search of seq id 2 in the protein databases (commercial and interference)
3. an oligo search of seq id 1 in the nucleic acid databases (commercial and interference)

Thank you,

Delia M. Ramirez, Ph.D.

Pending Nucleic Acid and/or Pending Amino Acid database searches now generate two sets of results. These databases were split into to two parts to reduce the time needed to update the databases daily. The split freed up more machine time for processing searches.

Searches run against the Nucleic Acid Pending database produce two sets of results, with the extensions, **.rnpm** and **.rnpn**
Searches run against the Amino Acid Pending database produce two sets of results, with the extensions, **.rapm** and **.rapn**

The Pending database search results should not be left in the case because they contain data that is confidential.

The searchable fields in the IFIPAT file are listed below. If you do
not specify a field, your term will be searched in the Basic Index,
which contains single words from the text of the title (TI), abstract
(AB, claims (ACLM, ECLM), description of figures (GI), and government
interest statement (GOCVI), as well as CAS Registry Numbers. There
are no fields that allow left truncation in this file.
